

Company Profile

Who we are? & What we do?

SOCAR brings modern hardware and partitioning systems to spaces that need to perform beautifully, every day. We help architects, contractors, and project teams build cleaner layouts, smarter access, and better privacy through solutions that balance function with a premium finish.

We are a growing company driven by contemporary interior needs, with the capability to support projects from selection and site inputs to installation and handover.

Where we fit

Every space has a different rhythm and a different requirement. Homes need privacy and ease. Hotels need durability and speed of service. Healthcare needs hygiene and safety. Education needs flexibility. Public spaces need scale and reliability.

SOCAR fits wherever partitions and access systems need to work smoothly, look clean, and last long, across residential, hospitality, healthcare, education, and public environments.

Why Socar?

1.

Versatility across sectors

We do not restrict ourselves to any one industry. We take on diverse briefs, unique site conditions, and complex requirements with the same readiness.

2.

Strong on-ground execution

Our installation teams handle end-to-end execution with technical precision, coordination discipline, and site maturity.

3.

Systems mindset, not just supply

We recommend the right system for the use case, plan it properly, and deliver it like a project partner, not like a vendor.

Products and systems

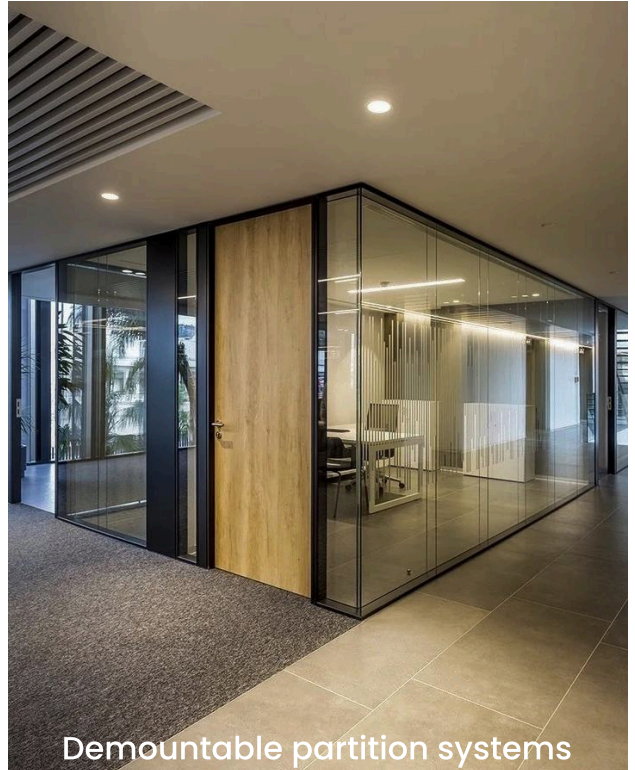

For hospitality and public spaces

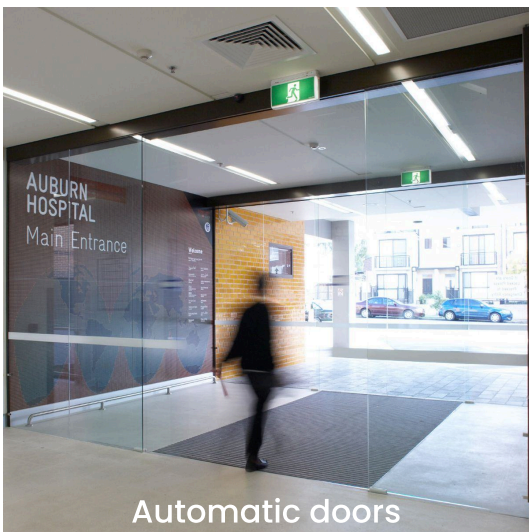

For commercial and institutional spaces

Aluminium glass shutters

Demountable partition systems

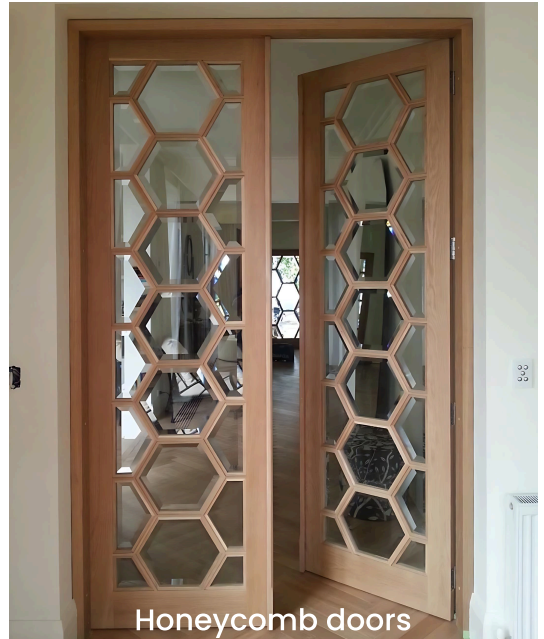

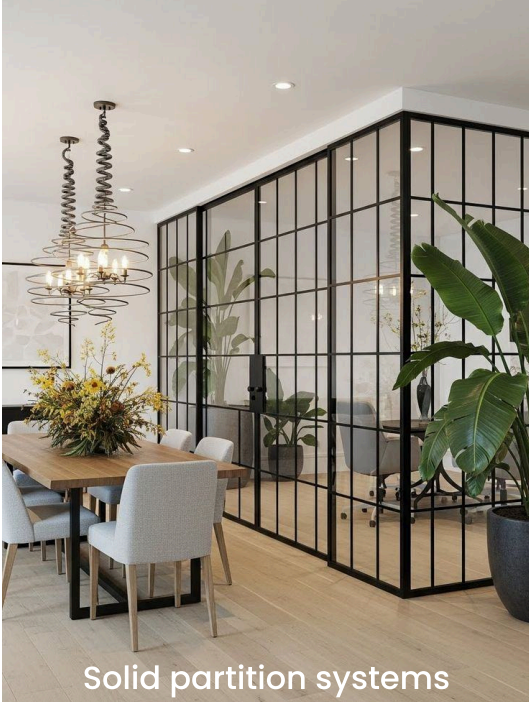

Automatic doors

Solid partition systems

For residential and premium interiors

Projects

Our Process

1. Enquiry and requirement capture

Understanding Use Case, Traffic, Privacy, Safety, And Finish Expectations.

3. System recommendation

Right Product Selection With Clear Scope, Drawings, And Technical Alignment.

5. Installation

On-Ground Execution With Quality Checks At Each Stage.

Site assessment

2.

Measurements, Site Constraints, MEP Coordination Inputs, And Installation Feasibility.

Execution planning

4.

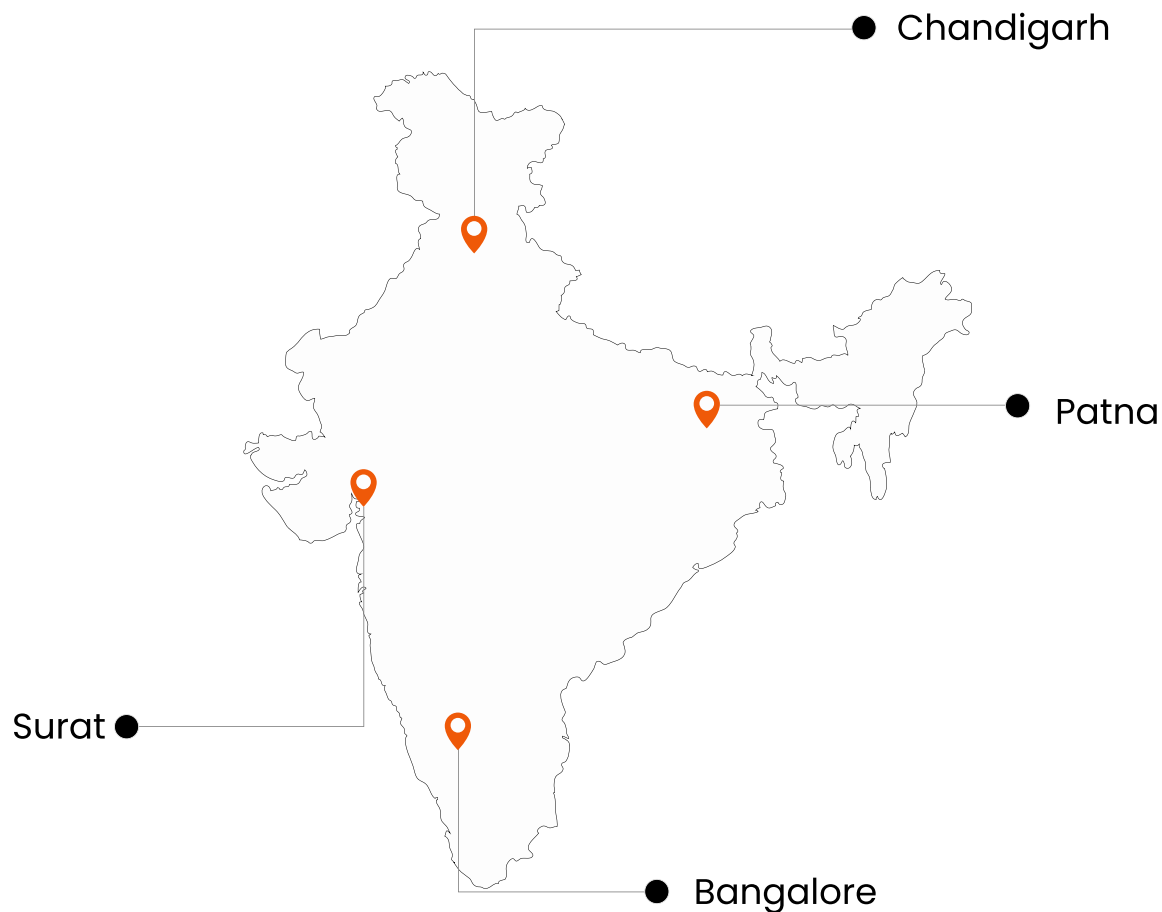

Scheduling, Site Readiness Checklist, And Coordination With Other Vendors.

Handover

6.

Final Alignment, Finishing, And Closure With The Project Team.

Presence
